## Electric Wiring Chart

### Required Electrical Power Information

A separate branch circuit with a main disconnect device supplied by the owner is required to supply power to compactor and baler power units. The installation of the main disconnect must be performed by a qualified electrician in compliance with all local and National Electrical Code regulations. ANSI standards require that the main "disconnect shall be located within sight of, and no more than 50 feet away from the main control panel." The actual voltage must be within +/-5% of the nameplate rating on the motor when the unit is operating at the system relief pressure. The following table lists minimum and recommended fuse and wire sizes for the various motors used on compaction and baling equipment manufactured by Wastequip, LLC.

Motor Horsepower Rating Phase	Line Supply Voltage	Full Load Amps <sup>1</sup>	Locked Rotor Amps <sup>2</sup>	Maximum Dual Element Time Delay Fuse <sup>3</sup>	Minimum Disconnect Rating <sup>4</sup>	Minimum Wire Size THHN CU 90°C / 194°F <sup>5</sup>			Recommended Wire Size THHN CU 90°C / 194°F Denotes same as minimum

1. Values for single phase motors obtained from Table 430.248 of 2014 NEC. Values for three phase motors obtained from Table 430.250 of 2014 NEC.

2. Values for single phase motors obtained from Table 430.251(A) of 2014 NEC. Values for three phase motors obtained from Table 430.251(B) of 2014 NEC.

3. Maximum fuse values are based on full load X 175% (300% for class CC) as determined from Table 430.52 of 2014 NEC. The fuse and wire sizes must always meet or exceed any federal, state, or local electrical codes or ordinances.

4. Minimum disconnect rating is the greater of the full load current X 115% as determined from Article 430.110 of 2014 NEC and the maximum overcurrent protection. It is the owner's/installer's responsibility to verify disconnect used is rated for correct horsepower motor at the supply voltage used.

5. Wire size base on motor full load current X 125% and ampacity of 90 degrees THHN copper wire found in Table 310.15(B)(16) of NEC 2014. When minimum wire size is rated below the maximum fuse size, the next wire size up will be used. Wire must not introduce more than 5% voltage drop. Check federal, state, or local electrical codes or ordinances.
